ROAD SYSTEM

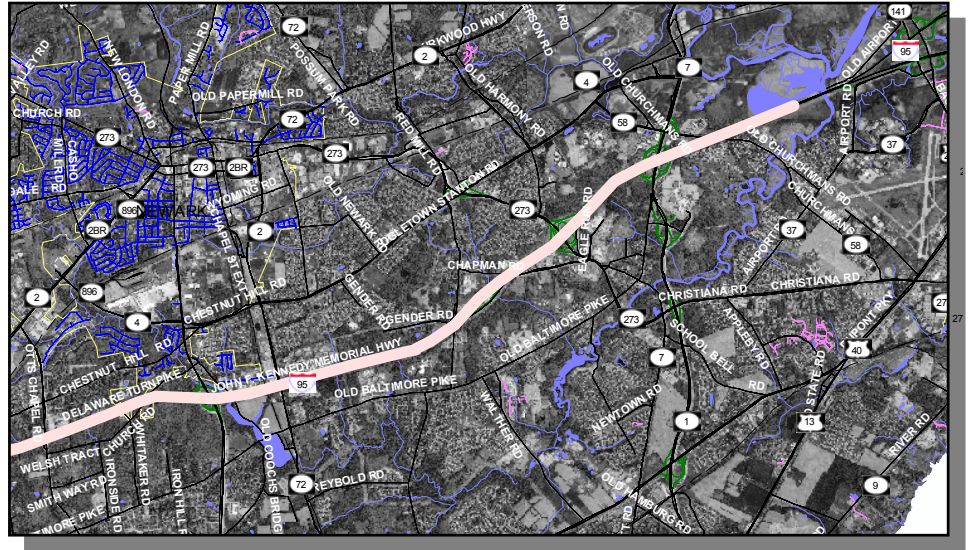

EXPRESSWAYS

I-95, MARYLAND STATE LINE TO SR 1 INTERCHANGE

PROJECT SCOPE/DESCRIPTION: This project will conduct a review and provide an analysis including recommendations of how to address the increased capacity of the area of I-95 from the Maryland state line through the SR 1 interchange. Also included are modifications to the I-95 toll plaza to accommodate highway safe speed toll lanes.

PROJECT JUSTIFICATION: This project will document the current travel patterns, levels of congestion, and safety issues throughout the area including the current toll facility. If appropriate, phased alternatives to address any deficiencies will be identified.

I-95, NORTHBOUND RAMP TO US202

PROJECT SCOPE/DESCRIPTION: This project will widen the existing ramp from northbound I-95 to northbound US202 in the I-95/US202 interchange from one to two lanes.

PROJECT JUSTIFICATION: The current demand for use of this ramp backs traffic, at various times during the day, onto I-95 as far south as the City of Wilmington. In so doing, it effectively restricts the capacity of two lanes on I-95, where only three exist, and creates a safety problem. With the improvements to US202 as part of the Blue Ball Properties project, and the widening of this ramp, the capacity and safety issues on I-95 will be eliminated.

I-95, WILMINGTON VIADUCT TO US202

PROJECT SCOPE/DESCRIPTION: This project includes the rehabilitation of existing bridges along I-95 from US 202 to the Wilmington Viaduct including bridges along and over I-95.

Also included in this work are bearing replacements, concrete repairs, painting, etc., and will also include approach slab replacements on the Wilmington viaduct; a short-term mill and overlay for the pavement section through Wilmington; and major rehabilitation on the superstructure of the Brandywine bridge including parapit walls, approach slab and the center joint.

PROJECT JUSTIFICATION: Due to bridge ratings, deterioration, vertical clearances, etc., these bridges require repair work to be completed.

I-295 IMPROVEMENTS

PROJECT SCOPE/DESCRIPTION: In FY 2000, the Delaware River and Bay Authority (DRBA) began a five to six-year rehabilitation project on all the approaches and ramps on the west side of the Delaware Memorial Bridge. The work involves the rehabilitation of the existing pavement, replacement or rehabilitation of bridges, the erection of new high mast light standards, surveillance cameras, electronic signage, and the installation of *E-ZPass* readers at the toll plaza. The ultimate objectives are to eliminate dangerous weaving traffic patterns and to provide a new road surface for the entire network. Construction on the eastbound lanes closest to the bridge was completed in FY 2000 and the work closest to the bridge on the westbound lanes is currently under construction.

DelDOT currently maintains I-295 west of Bridges 1-008E and 1-008W. DRBA is responsible for the remaining portion on I-295 to and including the Delaware Memorial Bridge. New planned improvements will be a joint effort by DelDOT and DRBA. DRBA will design and manage the improvements with oversight from DelDOT.

Improvements will include:

- Installation of ten new light standards at \$100,000 each - This cost covers procurement, installation, maintenance, and 30 years worth of electricity, with rate increases paid by DRBA. The light standards will be within the limits of DelDOT maintenance responsibilities for I-295 and US 13. The length of the project is from 1,500' west of the Interstate Connection of northbound I-95/I-295 to 2,400' west of US 13.
- A collector and distributor slip ramp with mill and overlay on I-295 - DRBA has developed a concept that will solve the existing weave problem from southbound I-95 to eastbound I-295 to southbound US 13. This solution incorporates a collector/distributor (C/D) ramp and barrier to preclude the weave and offers optional routes to replace the moves eliminated by the barrier. DRBA will remove the current ramps from southbound US 13 to the eastbound bridge and construct a new access which will require motorists to travel further south on US 13, and then make a cross traffic turn to get onto the Delaware Memorial Bridge. DRBA, DelDOT, and Federal Highway Administration (FHWA) engineers have analyzed this traffic volume and believe it is light enough to warrant the new pattern. An overlay and pavement rehabilitation to I-295 will also be done. The length of the project is from the interstate connection of northbound I-95/I-295 to 2,400' west of US 13.
- Third lane expansion – DRBA and DelDOT will continue to work together on the I-95/I-295 interchange issues to study lane flexibility and reach a decision that is best for all, at the most effective cost. During peak periods, the current two-lane configuration is not adequate. Air quality issues will need to be addressed. The length of the project is from I-95/I-141 interchange to 2,400' west of US 13.

I-295 IMPROVEMENTS (CONTINUED)

PROJECT JUSTIFICATION: This project will eliminate safety problems in the area.
